

Section C: Answer in one or two words

What does Excel add next to each column header after filtering?

👉 Drop-down arrow

Which Data Validation feature specifies minimum and maximum values?

👉 Whole number

Which Data Validation feature displays error alert?

👉 Error Alert

Which Data Validation feature is used to create a list of allowed options?

👉 List

Which sorting order arranges data from largest to smallest?

👉 Descending

✅ Section D: Answer the following questions

1. What is the purpose of sorting data in Excel?

Sorting arranges data in a specific order (ascending or descending) to make it easier to read and analyze.

2. What is the significance of sorting with multiple columns?

It allows data to be organized based on more than one condition, improving accuracy and better grouping of related data.

3. Explain the difference between ascending and descending order in sorting.

Ascending: Smallest to largest (A to Z, 1 to 9)

Descending: Largest to smallest (Z to A, 9 to 1)

4. How can you filter data in Excel?

Select the data range

Go to the Data tab

Click on Filter

Use the drop-down arrows to select required data

5. Describe the steps to set up data validation in Excel.

Select the cells

Go to the Data tab

Click on Data Validation

Choose validation criteria (e.g., list, number, etc.)

Set conditions and click OK
