D. Answer the following questions

1. Write the names of any three components of Krita's interface.

Answer:

- **Title Bar:** Located at the very top, it displays the name of the current file and software program.
- **Toolbox:** Positioned typically on the left, it holds all the vital tools needed to draw, select, and edit artwork.
- **Workspace / Canvas:** The blank core canvas area where you open, view, paint, and modify images.

2. What is the use of the Smart Patch Tool?

Answer: The Smart Patch Tool is used to flawlessly remove unwanted elements, defects, or blemishes from an image. It naturally blends the surrounding image pixels over the specified target spot.

3. What is the purpose of the Elliptical Selection Tool?

Answer: The purpose of the Elliptical Selection Tool is to isolate or select distinct circular and oval-shaped regions within an image for targeted editing or manipulation.

4. How can you open an image in Krita?

Answer:

1. Click on the **File** menu option located in the top menu bar.
2. Select **Open** from the dropdown list (or use the shortcut key combination **Ctrl + O**).
3. Locate and pick the preferred image file from the computer system, then click the **Open** button.

5. Define Polygon Selection Tool and write steps to use it.

Definition: The Polygon Selection Tool is a precise positioning layout tool used to choose multi-sided shapes or custom geometric regions bounded by consecutive straight lines.

Steps to use it:

1. Click and activate the **Polygon Selection Tool** from the toolbox panel.
2. Click on the drawing canvas to mark your initial starting node point.
3. Move the cursor along the border edges and click systematically at each vertex to form a line link.
4. Double-click at the final spot, or click directly back onto the original starting point to securely seal the shape boundary.

6. Write the steps to use a Gradient Tool.

Steps to use it:

1. Select the **Gradient Tool** from the primary toolbox.
2. Pick the desired palette colors to define the background and foreground shade ranges.
3. Position the mouse pointer at the required start position, then press and hold down the click option.
4. Drag across the vector paths in the chosen blending direction, then release the mouse trigger to distribute the smooth color shift.

E. Competency-Based Questions

1. Anay wants to remove an unwanted part from an image. He forgot the name of the tool. Help him by writing the name of the tool to use.

Answer: Anay can use either the **Crop Tool** (if he intends to remove frame borders/edges from the whole picture layout) or the **Smart Patch Tool** (if he wishes to paint away an internal background object seamlessly).

2. **Riya is editing a picture in Krita and now she wants to create a replica of it. How can she do it? Write the process for her.**

Answer: Riya can fulfill this task effectively using the **Clone Tool**.

Process:

1. Select the **Clone Tool** located inside the main toolbox workspace.
2. Hold down the **Ctrl** key modifier and click on the specific area of the image she desires to replicate (this sets the target reference source point).
3. Release the **Ctrl** key, move the brush cursor over to the blank layout area, and click and paint to reproduce the duplicate details perfectly.

F. Circle the selection tools of Krita

Note: The identified selection tools have been highlighted in purple below.

Rectangular	Clone	Close
