

Assess Your Skills: Krita (Layers & Animation)

Comprehensive Teacher's Answer Notes & Marking Scheme | Grade 8 Computer Science

A. Multiple Choice Questions (MCQs)

1. What describes layers?

Answer: b) Transparent stacked sheets

2. Which layer type is best for drawing precise shapes?

Answer: b) Vector

3. A group layer is used for _____.

Answer: a) Organise

4. What is the function of a mask layer?

Answer: c) Hide

5. Which key feature in Krita helps to visualise previous and next frames in animation?

Answer: d) Onion Skinning

B. Write T for True and F for False

1. Layers help to keep different parts of a drawing separate.

Answer: **T**

2. You cannot edit individual layers without affecting the rest of the image.

Answer: **F** (Rationale: Individual layers can be edited independently without changing contents on other layers.)

3. Mask layers are used to only reveal parts of a layer.

Answer: **T**

4. Group layers allow you to manage multiple layers as a single unit.

Answer: **T**

5. Layers cannot be renamed once created.

Answer: **F** (Rationale: Layers can easily be renamed at any time by double-clicking on their name in the Layers docker.)

C. Match the Following

Column A	Correct Match (Column B)
1. Onion Skin	d) Shows previous and next frames as overlays
2. Keyframes	c) Define important changes in animation
3. Playback	e) Buttons to play, pause, and stop animation
4. Timeline	a) Displays all frames in sequence
5. Frame	b) Images that make up the animation

D. Answer the Following Questions

1. Write the difference between frames and keyframes.

Answer:

- **Frame:** A frame is a single static image in a sequence of images that collectively construct an animation.
- **Keyframe:** A keyframe is a special frame that marks the definitive beginning or end point of a major change or transition in an animation sequence.

2. How can you hide or show a layer in Krita?

Answer: To hide or show a layer, click on the **Eye Icon** located next to the layer's name inside the **Layers Docker**. Clicking it once closes the eye and hides the layer; clicking it again opens the eye and reveals the layer.

3. How can you delete a layer in Krita?

Answer: Select the layer you want to remove in the Layers Docker, then either:

- Click the **Trash/Bin Icon** at the bottom of the Layers Docker panel, OR
- Right-click the layer and select **Remove Layer** from the context menu, OR
- Press the **Shift + Delete** keys on your keyboard.

4. How can you add a frame in Krita?

Answer: Go to the Animation Timeline docker, right-click on the specific cell/frame position where you want to insert a frame, and select either **Create Blank Frame** (to start fresh) or **Create Duplicate Frame** (to copy contents from the previous frame).

5. What is the purpose of timeline in animation?

Answer: The timeline serves as the central control panel for an animation. It lays out all frames sequentially over time, enabling the user to arrange keyframes, control playback speed, manage frame transitions, and navigate through the entire animation project.

6. Write the steps to open animation window in Krita.

Answer:

1. Click on the **Settings** menu on the top menu bar.
2. Navigate down and select **Dockers**.
3. From the side sub-menu, check/click on **Timeline** and **Animation** to bring up the workspace panels.
4. Alternatively, you can switch to the pre-built workspace layout by clicking the Workspace Switcher icon in the top right corner and selecting **Animation**.

7. Write steps to create animation in Krita.

Answer:

1. Open Krita, set up the workspace layout to **Animation**, and create a new project document.
2. Add a layer (preferably a raster/paint layer) to serve as your drawing element.
3. Go to the **Timeline** docker, right-click on frame 0, and click **Create Blank Frame**. Draw your first object/pose.
4. Move the slider to the next frame point (e.g., frame 1 or 2), right-click, and select **Create Blank Frame** (turn on *Onion Skinning* to trace the previous drawing position).
5. Draw the slightly shifted or changed movement for this frame. Repeat this process for consecutive frames.
6. Click the **Play** button in the workspace playback panel to watch your animation run.

E. Competency-Based Questions (Critical Thinking)

1. Aman wants to make a duplicate layer of his current layer he is working on but he forgot how to do it. Help him to make a duplicate layer.

Answer: Aman can easily create a duplicate layer using any of these simple methods:

1. Select his current layer in the Layers Docker, right-click it, and select **Duplicate Layer or Mask**.
2. Select the layer and click the **Duplicate Layer icon** (looks like two overlapping pages) located at the bottom of the Layers Docker panel.
3. Use the keyboard shortcut: select the layer and press **Ctrl + J**.

2. Somya has created an animation but she doesn't know that which component of animation workspace is used to play and pause the animation. Help her by telling the name of component.

Answer: Somya needs to use the **Animation Playback Docker** (or simply **Playback Controls**). This component contains control icons that resemble media buttons (Play, Pause, Stop, Forward, and Rewind) designed explicitly to control animation playback.

F. Find Six Words Related to Krita

Below is the word search grid with the 6 hidden Krita terms solved and highlighted:

F	I	L	T	E	R	P	F	I	X
P	A	I	N	T	I	Z	L	A	H
T	W	A	Q	L	Z	W	B	D	I
L	T	B	P	A	W	X	T	C	K
G	S	Y	E	Y	K	S	G	G	L
U	S	T	V	E	C	T	O	R	T
J	D	X	V	R	J	M	Z	O	X
D	V	U	S	S	C	Z	B	U	J
M	A	S	K	X	L	U	O	P	A
U	M	W	J	A	O	Z	P	T	F

Identified Krita Terms list & directions:

- **FILTER:** Row 1, Columns 1 to 6 (Horizontal)
- **PAINT:** Row 2, Columns 1 to 5 (Horizontal)
- **VECTOR:** Row 6, Columns 4 to 9 (Horizontal)
- **MASK:** Row 9, Columns 1 to 4 (Horizontal)
- **TIMELINE:** Column 8, Rows 3 to 10 (Vertical - T,G,O,Z,B,U,P,T)
- **LAYER:** Column 10, Rows 5 to 9 (Vertical - L,T,X,J,A)
